

dBTechnologies

PROFESSIONAL
AUDIO
2024

dBTechnologies was born in 1990 in Bologna, Italy, at the headquarters of AEB Industriale S.r.l., an Italian company with deep-rooted know-how in the professional audio industry. Since 1973, AEB Industriale spans decades under the sign of pure passion for audio technology and a strong specialization in sound reinforcement solutions. In just a few years, AEB Industriale's perspectives have become vibrant thanks to the prodigious development of the dBTechnologies brand, which achieved international recognition by designing,

manufacturing, and distributing highly innovative solutions for the audio field. In the early 2000s, new strategies brought business expansion when AEB Industriale's CEO Arturo Vicari acquired the Italian brand RCF and founded RCF Group (2004) as an international audio holding leader.

Today, dBTechnologies products are distributed in more than 160 countries worldwide and its technology continues nurturing that decades-long expertise thanks to a history of national and international experiences, dynamic developments, excellent services,

strategic and passionate investments in constant research and young talents.

With an unmistakable identity and a soul devoted to progress and innovation, the Company and its brand keep honouring their mission: bringing top-quality systems to the widest base of users worldwide while standing as an industry pioneer and a solid guide for all its people and partners.

The year 2023 represents a prestigious and exciting achievement as AEB Industriale s.r.l. celebrates its 50th anniversary, a first milestone studded with growth and success.

LOW NOISE REFLEX PORT

MADE IN ITALY

dBTechnologies presents two new point-source models within the acclaimed OPERA series, raising the bar and bringing a real revolution at a perfect time, 50 years from the foundation of the company.

Introducing the all-new standard in professional portable sound, made in Italy: OPERA REEVO.

OPERA REEVO 210 and OPERA REEVO 212 deliver an astonishing sound pressure level with touring-grade sound definition and a remarkable low-end extension in a compact and freshly designed enclosure accessible to anybody who wants great sound anywhere.

Quasi 3-way Active Speakers

The Quasi 3-way configuration delivers a vigorous yet pristine sound. This bold acoustic design is in-fact unparalleled in its category, inspired by dBTechnologies touring series, marks a clear step-up In the longest running and most appreciated dBTechnologies active speaker series of all times.

Opera Reevo translates the mix in an impeccable way, adapting the speaker to complex musical material especially when rich in the midrange region, where separation and clarity can really make a difference in the outcome of any performance.

This is granted by the coaxial acoustic design, featuring a front Integrated HF horn with diamond-shaped cutouts with the aim of rendering comb filtering-free high frequency reproduction, and at the same time of improving the upper woofer's efficiency.

Another phase plug enhances the lower woofer efficiency: this acoustic device greatly improves the transient response and overall behavior of this transducer.

Low noise reflex ports are integrated in the front molding. The honeycomb structure inside the ports helps reducing wind turbulence caused by the high airflow of this high SPL powerhouse.

Both models are equipped with a Class-D Digipro G2 amplifier which delivers an impressive 1050 W RMS and 2100 W Peak power, and features advanced DSP processing where FIR linear phase filters allow the systems to achieve a coherent audio performance, rendering an uniform and crystal-clear sound. Moreover, Opera Reevo offers factory-tailored voicing presets to adapt to multiple scenarios, including when in need of a wedge stage monitor or a completely standalone full-range PA system.

This versatile sound processing works in tandem with a cleverly designed box shape which combines cutting-edge design and ease of use. OPERA REEVO can be used as a wedge stage monitor or on a classic speaker stand support. When paired with a subwoofer can be mounted on a 36mm standard pole, and can be also suspended thanks to the integrated 3x M10 threaded eyebolts, making this enclosure a perfect permanent installation complement.

Both cabinets have a very compact size compared to the output SPL of 132.5 dB (REEVO 210) and 133 dB (REEVO 212), yet featuring 2x Neodymium woofers (10" for REEVO 210 and 12" for REEVO 212) and one 1.75" coaxial compression driver, keeping the overall weight down to 17.2 Kg / 37 lbs (REEVO 210) and 20.4 Kg / 44 lbs (REEVO 212).

When it comes down to business, Opera Reevo outstanding voicing ensures seamless and transparent rendition of any speech, where intelligibility is mission critical (such as corporate events or houses of worship) with a very wide nominal dispersion: 100°x80° (REEVO 212) and 100°x90° (REEVO 210) granting greatly consistent coverage from every listening position.

UNIQUE SPEAKER LOCK SYSTEM

Cutting-edge technology with inspired ideas

The current panorama of active speakers with digital processing offers a significant amount of products with more or less advanced technologies and cutting-edge features. But it's only when those technologies are combined with inspired ideas that products are really able to change the scenario. That's exactly what INGENIA represents: a new synthesis of knowledge in acoustics, mechanics, power electronics, DSP programming and innovative materials combined to realize a simple idea: a range of portable active speakers compact, modular, flyable, with a user-friendly interface, able to recognize the presence of a second stacked speaker or a subwoofer and automatically setup to ensure best coverage, acoustic coherence and high sound pressure.

INGENIA is not a simple active speaker, not a column system, not a conventional line array. INGENIA is simply INGENIA: a new way of thinking about sound reinforcement in any kind of situation.

Professional Active Speakers

INGENIA Series

The INGENIA series consists of four models with a power ranging from 400W to 900W. They are equipped with premium low frequencies transducers: 6.5" for IG1T and IG4T, 8" for IG2T and 10" for IG3T. Compression drivers range from 1" for IG1T and IG2T to 1.4" for IG3T and IG4T.

CEC - Controlled Energy Coverage: new horn concept

The horn of INGENIA is horizontally symmetric and vertically asymmetric. The horizontal dispersion is wide and constant; the vertical dispersion is narrow in the upper part and wide in the lower. This is because the INGENIA speakers are designed to work in single or stacked configuration with the two horns coupled one upon the other by overturning the upper speaker on the lower one.

Digipro® G3 Amp Modules

All models comes with the new generation of exclusive digital amplifiers Digipro® G3, which deliver a power that you can't expect from such a small amplifier. They also features an exceptionally lightweight design, SMPS technology with PSU auto-range and a very remarkably efficiency so that there is no need of cooling fans.

User-Friendly Interface

The INGENIA series is incredibly simple to set up. Just connect the speaker to mains through the new Neutrik® NAC3PX on rear panel, connect the audio using the balanced XLR connectors, select MIC or LINE input, adjust the volume and you're done. Leave everything else to the powerful DSP.

Configuration Wizard

The advanced interface guides the user since he turns on the speaker, asking for information on the use and the type of configuration he is going to use. The system automatically sets up, in order to quickly meet the demand. Of course he can change all the choices made at any time by either restarting the wizard, or manually changing the specific parameter.

The system even allows you to choose from a variety of configurations with one or more INGENIA speakers and combinations with one or more subwoofers, choosing among several dBTechnologies subwoofer presets.

A powerful processing

Behind the simple interface there is a cutting-edge processing, which manages mixer, power amplifiers, coverage steering and customize many other functions such as EQs, levels as well as all input devices. The OLED display, visible even in the sunlight, is mounted behind an elegant smoked screen and provides all the necessary information to the total system control. All editing operations are carried out through a single rotary encoder with switch, making them extremely easy and error-free.

As mentioned above, the INGENIA is equipped with the new Neutrik® NAC3PX mains connector that provides a safe connection with secure locking system. The integrated USB mini port allows the user upgrade the firmware of the INGENIA, ensuring that the speaker is always updated to the latest version (download from www.dbtechnologies.com).

Digital steering coverage

This is not the first time that dBTechnologies R&D designs speakers with asymmetric horns. Even on the famous OPERA series were adopted technical solutions of this type, but now the mechanical design of the waveguide is supported by a sophisticated processing in order to steer the coverage depending on the presence or not of the second speaker. The result is to ensure maximum intelligibility and transparency in the whole frequency range.

EPD

EPD - Element Position Detection

But now some questions arise: how to instruct the DSP of INGENIA that there is a speaker on it, that this speaker is the right one and that is correctly stacked? Infrared technology offers the solution.

Infrared Communication

The INGENIA speakers are equipped with an 'infrared-core handle' on top, which contains a system of infrared communication. When a second INGENIA speaker is stacked on another, there is a quick exchange of information between the two DSPs: the first becomes the master, the second the slave.

Self-rotating display

Since the INGENIA speakers are made to work in 'reversed stacked configuration', the OLED display is equipped with a self-rotation device that feels when the speaker is upside down, ensuring maximum intelligibility in every position, thanks to an integrated accelerometer.

This infrared detection system does not suffer the presence of sunlight, so it can be used safely in any outdoor environment without any lack of communication.

Control Mirroring

When two INGENIAs are used in stacked configuration, the speakers work as a unique system. Volume and DSP processing are unified. In other words, when the user turns the volume up or down on the master speaker, this change will automatically be mirrored on the slave.

Professional Active Speakers

Lightweight and heavy-duty enclosure

The housing is made with a new type of reinforced polypropylene that has a very elegant look and a fine finish. The enclosure surface is then immune to knocks and scratches and fully resistant to water and moisture. Internally, there is an aluminium reinforcing structure that, in addition to dampen vibrations and enhance the acoustic characteristics of the speaker, greatly improves the box toughness. Finally there is a hardware metal reinforcement for the flybar hidden inside the cabinet.

A magnetic rain cover is also available, in order to rapidly protect the speaker from rain, especially in outdoor events, whether the speaker is upright or upside down.

Speakers with neodymium magnet

All transducers in the INGENIA series feature neodymium magnets, improving reliability, performance and contributing to contain the overall weight of these modules. The weights, despite the huge technology contained in these speakers, range from 10.8Kg (23.81lbs.) of IG1T to 20.8Kg (45.86lbs.) of IG3T, making the INGENIA absolutely portable and easy to handle.

Flying configuration

All INGENIA speakers are equipped with a pole-mounting hole (D36mm). But in addition to the use on pole or speaker stand, there is a new flybar (DRK-IG) adaptable to all speakers of the series. This bar allows the user to hang up to two speakers in vertical array. Of course in this case two linking plugs are needed. Then the user will choose the appropriate processing preset and the DSP will set up everything so that you get all benefits of a line source system. Finally there is an additional accessory to mount the flybar to truss couplers and thus locking the aiming even in case of wind.

Unique speaker lock system

The locking system of the INGENIA is extremely rugged and reliable and the LP-IG accessory fits all the 4 INGENIA models. Moreover, to ensure the speakers to be perfectly aligned before locking the clamps, there are some feet and recessions on the top and the bottom of the enclosure. This solution avoids incorrect operations in any way and ensures perfect alignment, maximum safety and a longer life of the mechanical parts.

Professional Active Speakers

RDNet-EH

Ingenia Handle for RDNet control

dBTechnologies' INGENIA series reaches its full potential with RDNet-EH. A simple, easy-to-mount accessory adds real-time-control capability to all models of INGENIA series.

In facts, thanks to RDNet-EH, all Ingenia speakers can be remote-controlled via RDNet protocol and Aurora Net software, adding further flexibility and ease of use to one of dBTechnologies' more versatile systems.

RDNet-EH substitutes standard INGENIA's handle and allows both control of a single-element system or a coupled-element system (two stacked Ingenias of the same model).

Users can easily remove standard INGENIA lower handle and replace it with RDNet-EH, which makes the system ready for RDNet connection thanks to built-in data IN and data OUT RJ45 connectors.

Beside this accessory, you only need a dBTechnologies' RDNet controller (Control 2 or Control 8) and Aurora Net software. This way, you can remotely optimize system's EQ, Delay and even the exclusive Digital Steering function, adapting INGENIA PAs to the venue and application (speech, playback or live music).

**CUSTOMIZABLE BALANCED OUTPUT CHANNEL
(LINK OUT/AUXILIARY)**

ULTRA-WIDE COVERAGE

ES is the first dBTechnologies' Entertainment System series: complete plug-and-play column systems, equally multifunctional, portable, space-saving and user-friendly.

ES family grows stronger with ES 1203, a complete stereo sound system encompassing its predecessors' versatility with striking SPLs (the system features a 2400W last-generation power amp) and an impressively coherent throw pattern.

Tri-Amp Entertainment Stereo System

The most powerful complete PA system

ES1203 is a 3-amped stereo sound system composed by 2 passive wooden tops and one active wooden subwoofer equipped with 2x 12" woofers. The sub hosts last-generation Digipro® G4 2400W Peak Amp. A powerful DSP (controlled by an intuitive user interface placed on the top of the sub) manages all function of the 5-channel on-board digital mixer, as well as the system configurations.

Ultra-wide coverage

Each top satellite is equipped with 4x 4" mid-woofers, whose alignment allows an asymmetrical vertical coverage (thanks to the Logarithmic Curved Column Array technology). The unique design of phase plugs widens the horizontal coverage and guarantees a perfect intelligibility. Moreover, on board DSP allows users to choose among 3 Configuration Modes (Mono, Stereo or Double Column) and 3 different Steering Modes (Up/Down/Far). This way, the system adapts to all kind of environments and guarantees the best throw pattern.

ES 1203

Speaker Type	3-amped Stereo System with two full-range tops and one semi-horn loaded subwoofer
Frequency Response [-10dB]	35 - 20.000 Hz
Max SPL	132 dB
MF-HF	8x 4", v.c. 1"
MF-HF Type	Neodymium
LF	2x 12", v.c. 2.5"
LF Type	Ceramic
Directivity [HxV]	97° x 60° (single top)
Amp Technology	Digipro® G4
Amp Class	Class-D
Peak Power	2400 W
Controls	1x OLED Display with rotary encoder w/button 1x Audio signal monitoring LED 1x USB port (service data)
Power Supply	Full-range with PFC
Power Connection	VDE socket
Cooling	Convection
Controller	DSP 28/56 bit
Converter AD/DA	24 bit/48 kHz
Limiter	Peak, RMS, Thermal
Crossover Frequency LF-MF	160 Hz
Digital Steering	Up/Down/Far
Input Channels	1x Mic/Instrument Combo (XLR/Jack) 2x Mic/Line Combo (XLR/Jack) 1x Bluetooth® built-in receiver
Mix Output	1x XLR balanced output
Housing (Subwoofer)	Plywood with full metal grille
Housing (Tops)	Plywood with full metal grille
Pole Mount	Ø36 mm (M20 thread)
Handles	3 (1 on top + 1 each side on sub)
Dimensions WxHxD (Tops)	110x460x160 mm - 4.33x18.11x6.30 in
Dimensions WxHxD (Subwoofer)	360x680x545 mm - 14.17x26.77x21.46 in
Weight (1 Top)	3.3Kg - 7.27lbs.
Weight (Subwoofer)	29.3Kg - 64.59lbs.

Fast-lock top speakers connection

Top satellites can be used separately in a Stereo configuration (placed on tripods or installed with WB-44 accessory) or connected together in a Mono Configuration: the enclosure of the two satellites embeds a metal lock connection system, which assures perfect top-to-top matching without the risk of incorrect assembly and includes the electrical connection between the two tops. One of the two satellites receives the powered signal from the subwoofer through a 4-poles male Speakon™ connector and relaunch the audio to the other top.

On-board 5-channel Mixer

ES1203 features an on board 5 channel mixer: the first channel features a Mic/Instrument balanced/unbalanced combo connector with an adjustable anti-feedback filter, impedance compensation and microphone gain with 3 positions (0, +10, +20dB). The second and third channels are Mic/Line inputs with balanced/ unbalanced combo connector. This allows the system to manage up to 3 mic lines at a time.

The balanced Aux/Mix output can be used as a direct link, or, alternatively, as an Aux output. In this case, you can actually feed a stage monitor or another speaker for which a custom separate mix is needed. When in double column mode, this output acts as a source of a second ES system providing left or right content.

Integrated Stereo Audio Bluetooth® Module

ES1203 is equipped with a built-in Bluetooth® module, which receives stereo audio from devices such as mobile phones, tablets or any other audio device with a Bluetooth® connection. The system manages the Bluetooth® audio autonomously as a separate channel.

User Friendly OLED display

ES1203 is incredibly simple to set up. Users are guided step-by-step to configure the system according to the application thanks to the advanced graphical interface. In fact, the OLED display allows to enter the heart of the system, recall configuration presets, adjust levels, EQ and create a pre/post gain mix for different purposes. A rotary encoder with a switch allows to control any operation easily and quickly.

A Powerful Subwoofer

The semi-horn loaded subwoofer houses 2x 12" woofers and the amp module, and the OLED display with system controls. In addition to the input connectors and controls of the user-interface, there are two Speakon outputs and the power connector. The enclosure, sturdy and stylish, is made of plywood coated with a durable scratchresistant black coat, which makes it truly road-ready. The dolly DO-ES1203 allows to transport the system quickly and smoothly.

Clean and elegant in Mono Mode

When used in Mono mode, the system can be completed with DP-ES1203, a designed wooden pole which levels out the overall design resulting in an elegant, unobtrusive look which perfectly fits permanent installations.

The ES1203 bundle is composed by a subwoofer with its cover, two tops with bag, a D35mm pole, 2 Speakon cables (2.5 mt and 7 mt), power supply cable.

DP-ES1203: design pole

Bi-Amp Entertainment Portable System

ES 1002

BI-AMPED ACTIVE PA SYSTEM

1800W PEAK POWER

1 TOP 8x 4" MID-HI WOOFERS

1 SUB 2x 12" WOOFERS

EXTRA-PRECISE COVERAGE DISPERSION (HORIZONTAL AND VERTICAL)

NEW PHASE-PLUG DESIGN FOR PERFECT INTELLIGIBILITY

2 INDEPENDENT INPUT CHANNELS

ENHANCED USABILITY FOR CONTROL PANEL

8 EQ PRESETS

More power, precise coverage and advanced usability

ES1002 comes with a subwoofer and 1 column top, both powered by a class-D DIGIPRO® G3 amplifier delivering 1800 W peak.

The top satellite is equipped with 8x 4" mid-woofers, whose alignment allows an asymmetrical vertical coverage, avoiding any useless dispersion of the sound above the audience. Moreover, each mid-range woofer is provided with a newly designed phase-plug able to widen the horizontal coverage while guaranteeing a perfect intelligibility of the vocal range from every listening position.

ES 1002

Speaker Type	Bi-amped System with one full-range top and one semi-horn loaded subwoofer

Housing (Subwoofer)	Plywood with full metal grille
Housing (Top)	Plywood with full metal grille
Pole Mount	Ø36 mm (M20 thread)
Handles	3 (1 on top + 1 each side on sub)
Dimensions WxHxD (Top)	110x905x160 mm - 4.33x35.63x6.30 in
Dimensions WxHxD (Subwoofer)	360x680x545 mm - 14.17x26.77x21.46 in
Weight (Top)	5.8 Kg - 12.79 lbs.
Weight (Subwoofer)	29.3Kg - 64.59lbs.

The sub encompasses 2x 12" woofers in bass-reflex configuration, the amp module and the control panel, whose inclined design improves usability. I/O section allows to connect up to 2 INPUTS (XLR mono and RCA stereo with independent volume controls) and provides a balanced link out to feed a second system or a stage monitor. A rotary with 8 preset EQ helps users to perfectly tune the system, adapting it to different environments and uses (playback, live music, speech etc.).

The enclosures of both top and sub are made of plywood, coated with a durable scratch-resistant finish, which makes ES1002 truly road-ready.

Bluetooth®

ES503 is a complete 3-element system which adapts to several uses (and thousands of different users), thanks to a built-in digital mixer, an OLED display user interface and a Bluetooth® audio receiver.

ES503 is a 1000W 3-amped sound system composed by 2 slave 4x 3" full-range tops and 1 master 12" subwoofer. The sub hosts a Digipro® G3 amp module with auto-range PSU and a 3-channels mixer with Bluetooth connection. A powerful DSP manages all function of the onboard digital mixer, making the ES503 a real gem in terms of sound performance and versatility.

ES 503

Speaker Type	3-amped Stereo System with two full-range tops and one subwoofer
Frequency Response [-10dB]	37 - 15.000 Hz
Max SPL	121 dB
MF-HF	8x 3"
MF-HF Type	Neodymium
LF	12"
Directivity [HxV]	95° x 65°
Amp Technology	Digipro® G3
Amp Class	Class-D
Power Amp	1000 W
Controls	1x OLED Display with rotary encoder w/switch 1x Audio signal monitoring LED 1x USB port (service data)
Power Supply	Auto-range SMPS
Power Connection	VDE socket
Cooling	Convection
Controller	DSP 28/56 bit
Converter AD/DA	24 Bit/48 kHz
System Presets	Factory presets + User defined
Limiter	Dual Active, Peak, RMS, Thermal
Crossover Frequency LF-MF	206 Hz
Mic/Instrument Channel	1x Combo (XLR/Jack) balanced/unbalanced input
Line Channels	2x Combo (XLR/Jack) balanced/unbalanced inputs
Media Channel	1x Bluetooth® built-in receiver
Mix Output	1x XLR balanced output
Housing (Subwoofer)	15mm Black Painted Plywood
Housing (Tops)	Polypropylene PP
Handles	2x lateral side (Subwoofer)
Dimensions WxHxD (Tops)	95x360x137 mm - 3.74x13.98x5.39 in
Dimensions WxHxD (Subwoofer)	465x400x430 mm - 18.3x15.7x16.9 in
Weight (1 Top)	1.9Kg - 4.19lbs.
Weight (Subwoofer)	16.4Kg - 36.16lbs.

The ES503 bundle is composed by a subwoofer, two tops, a D25mm pole and a Speakon/Speakon cable to connect the sub to the top. The speaker pole is splittable in two segments for easy transport.

The system also provides a large group of accessories, such as 2 D25mm tripod stands with a dedicated transport bag, a bag to carry 2 tops and a D25mm pole, a bag for the 12" subwoofer, a trolley, a cable kit with two 7m Speakon/Speakon cables. A stereo kit comprising 2 tripods + 2 7m Speakon/Speakon cables and a transport kit comprising 1 sub bag + 1 top bag + 1 trolley are also available.

Bi-Amp Entertainment Portable Systems

ES 802

Great versatility

After the success of the ES503, dBTechnologies complete its Entertainment System series with ES802, a bi-amped system combining power, extremely coherent coverage, excellent acoustic performance, easy transport and set up.

The powerful DSP and the particular flexibility of the inputs also ensure a great versatility. That's why ES series is the perfect solution for performers requiring small-sized plug and play systems providing a lusty acoustic performance.

The satellites have been designed using 4x 3" transducers ensuring a coherent coverage in every environment. The subwoofer houses a 1200 W amplifier and is equipped with a 12" woofer, ensuring a low frequencies consistency which you wouldn't expect from such a compact system.

The powerful DSP of the ES802 system provides 8 configurations, allowing to digitally equalize the audio signal according to different usage needs. The system allows to input both a connection from a mixer (line level) and a microphone connection. The balanced 'LINK' output allows to create bigger ES systems or to feed the mix to any other system.

Weight (Subwoofer)	16.4Kg - 36.16lbs.

LVX 8
LVX 10
LVX 12
LVX 15

Professional Digital *Active Speakers*

Excellent pedigree. Fit for every time

LVX active loudspeakers series is the answer to all those fixed installations and live music requirements where sound reinforcement systems must be lightweight, stylish, portable, powerful and in line with the highest professional standards. Coming from the experience gained in designing touring products as the renowned DVX series, the new LVX series offers smart solutions with a special attention to the needs of fixed and portable installations.

Advanced Technology

The LVX series uses DIGIPRO® series digital amplifiers with powers ranging from 400W (LVX 8 and 10) to 800W PRG (LVX 12 and 15). These highly efficient amplifiers provide high power, limited weight and are totally silent due to the low thermal dissipation and no cooling fans required.

The digital preamp with DSP controls audio crossover, frequency response, dual active peak-RMS-thermal limiter, and acoustic alignment. A selector enables to select one of two different equalizations - "FLAT" or "PROCESSED" - to provide the right sound in any occasion.

Elegance yet strength

The enclosure is made of robust 12mm plywood with a look very elegant and refined, available in both black and white. All models are equipped with handles for easy transport. The LVX 8 and 10 have a single handle on top; the LVX 12 and 15, in addition to the handle on the top, have a pair of handles on sides. In case of installation where you want to keep as much as possible a stylish and sober look, the white installation version of all the four models comes without the pole mount cup and the handles, providing a very transparent look.

A D36mm pole mount cup on the bottom (black version only) allows all LVX speakers to be placed on poles or tripods, so as to be used as portable sound systems for any live music applications.

Digital Active Speakers

Impeccable Sound

The voicing of these speakers is very linear and designed to for any audio content, such as speech, background or live music, multimedia contents, etc., respecting their characteristics and dynamic response, and with a high level of performance. Four models available: LVX 8, 10, 12 and 15.

The dispersion of the constant directivity horn is symmetric and rotatable in order to keep the same coverage in case of horizontal use. This is particularly valued even in case of use as a stage monitor, configuration possible thanks to the rear angle of 45°.

Versatility at its maximum level

There are two types of wall-mounting brackets: one for vertical installation, especially studied for live applications or truss mounting, with variable pan-tilt options (a pole mount cup is included as a stand adapter). The second is suggested for horizontal permanent installations, where you can easily change tilt position.

Coaxial Active Stage Monitors

Active Coaxial Stage Monitors

A new generation for flagship wedge Flexsys; FMX series encompasses a range of tailored monitoring solutions featuring coaxial design, precise dispersion pattern, last-generation sound processing with linear phase FIR Filters and maximum adaptability to the needs of every performer.

FMX is an active 2-way coaxial stage monitor series available in 3 models (10", 12" and 15") equipped with 800 Peak (for FMX 10) or 1200 Peak (for FMX 12 and 15) Class D amplifiers.

The wedge's coaxial acoustic design, together with its custom horn design and its advanced DSP featuring linear phase FIR filters, provides an even, highly-intelligible sound.

In fact, FMX's horn design allows a very precise dispersion pattern (60° horizontal and 90° vertical) which can be easily reversed (90° horizontal and 60° vertical) by rotating the horn, adapting the wedge to the habits of the user.

Moreover, 8 on-board presets optimize EQ for different needs making FMX a skilfull yet easy-to-use tool for performers of every kind.

All wedges of the series feature a peculiar front-rear grille design, a single handle integrated on the bottom side of the plywood cabinet and a 36mm pole mount on side panel which further enhance FMX's versatility.

OPERA

OPERA 10

OPERA 12

OPERA 15

Professional Active Speakers

1200 W PEAK POWER

NEWLY DESIGNED ASYMMETRICAL HORN

ADVANCED DSP WITH FIR PROCESSING

2 INPUT CHANNELS (MIC-LINE/MIC-INSTR)

SELECTABLE OUTPUT CHANNEL (LINK CH1/MIX CH 1+2)

8 EQ PRESETS

Being for many years dBTechnologies' flagship, the celebrated Opera series left a powerful footprint in sound reinforcement history. Now dBTechnologies makes the history evolve, getting back to basics with these three brand new 10", 12" and 15" professional powered speakers.

Exceptional power and a unique acoustic design combined in order to deliver a vigorous yet pristine sound, successfully adaptable to both playback and live music applications. With new OPERA series, dBTechnologies succeeded once again in packing leading edge DSP processing, advanced design features and user friendliness in an unrivalled cabinet in its price range.

Unrivalled power and design at the service of performers

Opera's asymmetrical horn, which dramatically contributed to the success of the series, has been completely redesigned in order to obtain both an asymmetrical vertical dispersion and a double horizontal dispersion, ensuring an optimized throw pattern.

All 3 models of the series are equipped with a powerful Class D 600 W amplifier featuring advanced DSP processing where FIR filters allow the systems to deliver a coherent audio performance, uniform and crystal-clear from every listening position, thanks to an extremely flat phase response.

Professional Active Speakers

A stellar audio performance sets the stage for success

All models features 2 input channels (allowing live performers to use the system both for vocals and instruments or vocals and playback music), 2 selectable output channels (LINK CH 1 or MIX CH 1+2) and 8 preset equalizations which adapts to the most different environments, making OPERA the perfect companion for the discerning performer.

The new functional yet polished design features a full grille, a top and a side handle easing monitoring purposes. The cabinet comes with an integrated pole mount cup allowing stacked configurations with dBTechnologies bass bins.

Bluetooth® Active Speakers

KL series aims to enhance usability and versatility in dBTechnologies' 2-way active speaker series: combining efficiency to a professional sound performance, KL systems feature Bluetooth® connection, 3 INPUT channels, impressive SPLs and a powerful DSP where linear phase FIR filters ensure the most accurate sound reproduction.

KL family is comprised of 3 models, respectively equipped with 10", 12" and 15" woofers and 1" compression driver. The system is driven by a powerful and efficient amplifier (400 W for KL 10 and 800 W* for KL 12 and 15) featuring dBTechnologies' advanced DSP processing where linear phase FIR filters allow the systems to deliver a coherent audio performance, uniform and crystal-clear from every listening position. Moreover, users are enabled to enhance lower and upper frequencies with the convenient DSP preset function.

All cabinets feature 3 INPUT channels with independent level management: CH1 is a balanced combo XLR/6.3 mm Jack line/mic INPUT with a switch to select source; CH2 is a balanced XLR and TRS jack IN; CH3 allows to connect any device via Bluetooth® connection. A balanced link XLR-M Output allows connection to a second loudspeaker or a mixer. A slide switch allow to select which signal is sent to the main output: LINK (the signal is taken before any level control) MIX (the signal is determined by the level control of each channel and Main).

The solid and versatile cabinets come with a clean and contemporary full grille design, enhancing both portability thanks to 3 integrated handles (1x side and 1 on top) and multifunctionality: each cabinet can be used horizontally as a stage monitor (on both sides) and features a pole mount cup with 2 tilt angle options (0° and 7.5°) to use KLs on tripods or stacked on dBTechnologies Subs. KL comes with its soft cover equipped with a pocket specially designed for cables storage.

2-Way Active Speakers

Maximum amp efficiency for an assertive SPL

B·Hype series aims to provide a professional sonic performance to all kind of users, combining an extremely efficient CLASS D amplifier with aggressive sound pressure levels while delivering the most accurate sound reproduction.

Faithful and loud

The internal acoustic design features an innovative asymmetrical horn ensuring a uniform throw pattern. What's more, dBTechnologies team crafted an accurate digital sound processing, allowing users to choose between 2 preset EQ: FLAT or BOOST. This way, all B·Hype models deliver the most faithful sound performance while boosting any background music.

Sharp design and enhanced portability

B·Hype's featherweight cabinets (from 14 to 38 lbs) come with a clean and contemporary full grille design, enhancing both portability (3 handles, 1x side and 1 on top) and multifunctionality. Each cabinet can be used horizontally as a stage

monitor (on both sides) and features a pole mount cup in order to be used on tripods or stacked on dBTechnologies Subs.

Complete control of low end power

Designed for ground stacked applications, SUB 900 is the perfect choice whenever a powerful lower extension is required.

Indeed, both models of the series are equipped with high-performance components housed into a bass reflex design and a CLASS D 900 W RMS amplifier.

This is why these cabinets ensures a deep, full-bodied sound in every kind of applications.

SUB 900 are equipped with a single premium woofer (15" for SUB 915 and 18" for SUB 918). A 900 W RMS Class D Digipro G3 power amplifier ensures advanced efficiency as well as forcible sound pressure levels (up to 134 dB for SUB 918).

Not only, thanks to networking capability, users are allowed to complete control of low end frequencies of their PAs. In facts, dBTechnologies' SUB 900 are ready for full remote control via RDNet and software Aurora Net.

SUB

RDNet remote control

First in dBTechnologies' SUB series, both SUB 915 and SUB 918 are enabled for real time monitoring and remote control via RDNet protocol and Aurora Net software, allowing advanced subwoofer configurations and with perfect low-end matches with dBTechnologies' full-range systems enabled to RDNet communications.

Both models of the family also feature on-board controls for attenuation, a polarity switch and DSP controls for a delay up to 4.5 milliseconds with 0.5 milliseconds steps (while a maximum 21 ms delay is allowed via Aurora Net). A second rotary allows to set crossover frequency from 70 to 110 Hz.

Compact and sturdy cabinet

The robust plywood cabinet encases high-end performances in limited weight (34.8 kg for SUB915 and 41.8 kg for SUB918) and features 2 integrated handles on the top edges, while the back side is equipped with wheels mounting for smooth transportation.

What is more, being designed for both vertical or horizontal use, 2 M20 mounts on the top and side panels allow to mount on the sub any full-range speaker using a standard M20 threaded pole.

Low end precision

SUB 600 series has been designed to create complete PA systems making the most of dBTechnologies portable full range systems.

Able to deliver outstanding sound pressure levels in spite of their compact housing, SUB 600s provide a clean, impressively precise low-end reproduction. All models features a 600W RMS Class D Power Amplifier with SMPS and are equipped with respectively 12", 15" or 18" premium transducers.

Sub 600s' remarkable audio performance allows users to build most of the PA systems with 1 single sub and 2 full range speakers, avoiding any external processing or crossover thanks to a balanced Xover signal to left and right

speakers. Controls on the amp panel allow user to operate with Mono or Stereo audio feed, activate polarity inversion and choose Outputs link mode (True Bypass or Xover). Whenever a further punch is needed, a low-frequencies boost EQ can be set thanks to the Sub Mode switch.

The series comes with a full grille design in a lightweight wood cabinet strengthened with a hardwearing, scratch-resistant black covering. Carved side handles enhance portability. The design of the top side eases subs stacking in larger systems and features a M20 pole mount thread to stack full-range speakers.

MINIBOX **L160**

A powerful yet surprisingly light cabinet, the remarkably compact L160D offers a variety of connection options to provide convenient sound reinforcement for multimedia applications.

Paired with a DSP, the two 5" phase-corrected loudspeakers deliver astonishingly high sound pressure levels for their size and an amazingly transparent and articulate sonic image.

The multifunctional housing offers wall-mount fixing points for permanent installation and a pole mount for portable use.

Compact Active Speakers

MINIBOX K SERIES

Active Speakers

The most powerful compact cabinet in its class, the K300 is chock-full of innovative technologies.

Housed in an ultra compact enclosure, its Digipro® bi-amped digital power amp delivers high performance and sound pressure levels. The 1" HF driver renders midrange frequencies with pinpoint precision, and its response is richly detailed.

The integrated DSP further enhances clarity and accuracy, and protects components using digital limiters.

ELECTRONICS

AC26N

Description

Digital Audio Processor, 2 in - 6 out, Full Range power supply, RDNet Hardware Interface, USB interface, remotable via RDNet or USB. AES-EBU in/out. Max input level 21dBu (without pad) / 27dBu (with -6dB pad). Max output level 21dBu. DSP Processing: 28/56bit - 48Khz. A/D and D/A Converts: 24bit - 96Khz

ASX 24

Description

2-Way/3-Way stereo - 4-Way Mono Active Crossover. 2x XLR-Input with 25Hz high-pass filter switch, 6x XLR-Output, high quality 24dB/octave slope Linkwitz-Riley filters, In/Out level controls, xover frequency selection for all bands, mute key and phase reversal for each band, adjustable delay time up to 2ms for outputs, "LOW SUM" function to convey the whole LF range of L&R channels to a mono sub out, multiband limiter with adjustable threshold

CONTROL 2

Description

Hardware interface for connecting devices compatible with dBTechnologies RDNet system to a PC through an Ethernet or USB connection. The RDNET CONTROL 2 unit can manage up to 2 subnets. Up to 32 devices can be connected to each subnet (2 subnets x 32 = total 64 devices). The addressing of the various devices is handled automatically by RDNET CONTROL 2 interface.

CONTROL 8

Description

Hardware interface for connecting devices compatible with dBTechnologies RDNet system to a PC through an Ethernet or USB connection. The CONTROL 8 manages up to 8 subnets. Each subnet handles up to 32 devices. So it is possible to control the maximum number of devices managed by this protocol (256) connected with RJ45-RJ45 cables or XLR-XLR balanced audio cables. The addressing of each device is automatically handled by the CONTROL 8.

DSX 2040

Description

Digital 2 in 4 controller, 48Khz/32-bit signal processing, dynamic range >110dB(A), 3000ms total delay, 4 parameters. EQs per in- and output, programmable x-over and routing-section, editable limiter per output, large LC-Display, bank for 30 presets, USB-interface for programming and data-transfer, 19", 1U, in- and outputs on balanced XLR

SWITCH 6

Description

2 x XLR-Input into 2x6 XLR-Output, 1 Unit with LED Display and Remote Control. Up to 6 units in parallel mode
